

Streamlining WorkSpaces Utilisation for a Global Consulting Organisation

About the company

Founded in the mid-19th century, this company is a global leader in professional services, helping clients across a wide range of industries to achieve and sustain success. It offers audit, consulting, financial advisory, risk management, and tax services through its network of professionals located in more than 150 countries.

Known for its commitment to delivering quality, innovation, and excellent service, the company employs over 300,000 professionals dedicated to making an impact that matters for their clients, their people, and society. They strive to lead the profession by setting high standards, fostering an inclusive and ethical culture, and driving positive change through corporate social responsibility initiatives.

With decades of experience, the company provides insights that help clients manage complexity and face the future with confidence. It is proud to serve four out of five Fortune Global 500® companies and thousands of other clients who trust it to provide solutions to their most complex challenges.

Case Study

BACKGROUND

A global consulting firm was facing challenges managing over 10,000 users within their WorkSpaces environment and sought to enhance visibility and reporting capabilities. Despite having an in-house solution, AWS recommended exploring a more efficient alternative to manage and optimise WorkSpaces utilisation.

CHALLENGE

The primary challenge involved streamlining WorkSpaces management, improving reporting functionalities, and significantly reducing annual licensing costs, all without compromising the operational efficiency of the firm's extensive WorkSpaces environment.

SOLUTION

Nuvens, introduced by Amazon, implemented WorkSpaces Manager to address the firm's challenges. This suite of tools offered detailed insights into WorkSpaces utilisation, identifying underused or inefficiently allocated resources. By distinguishing between actively used WorkSpaces and those that were not, Nuvens was able to right-size the WorkSpaces requirements, adjusting capacities based on actual needs. This adjustment ranged from reducing WorkSpaces from \$85 to \$55 for underutilised ones.

WHY NUVENS?

We specialise in Amazon WorkSpaces and AppStream 2.0 as a trusted AWS Advanced Partner, assisting clients in all AWS regions with the migration of their desktops and applications to the AWS Platform. Using Amazon WorkSpaces Manager, you can automate, deploy, and manage your remote workforce from anywhere in the world.

RESULTS

The adoption of WorkSpaces Manager led to a substantial reduction in WorkSpaces from 12,000 to under 10,000, realising savings of over six figures per month. Furthermore, the firm achieved a more efficient WorkSpaces environment that can be dynamically adjusted to meet changing requirements, ensuring ongoing cost efficiency and optimisation.

FUTURE OUTLOOK

The consulting firm is now equipped to autonomously monitor and optimise their WorkSpaces environment, with the scalability to adjust according to future needs. The partnership with Nuvens has set a new benchmark for the firm to maintain operational efficiency while exploring growth opportunities.
